SUBJECT INDEX, VOLUME 23

Titles of papers are given in italics.
To facilitate reference, the number of each Part is indicated in bold.

Accelerated Auto-coagulation of Skim Latex **4** 257
Acetylene *see* Yield stimulants
Acid phosphatase *see* Latex enzymes
Aerial defoliation **3** 250
Aerial spraying **3** 250
Aerobacter sp **1** 33, 35
Aldolase *see* Latex enzymes
α-naphthyl acetate *see* Substrates for enzyme location
Antiplugging agents **2** 86
Artificial defoliation **3** 249
Artificial pollination **5** 365
Assisted biological coagulation **1** 32, **2** 38
Autocoagulation **1** 33
Automated Colorimetric Determination of Magnesium in Foliage of Hevea *and other Tropical Crops* **4** 298

Bacillus subtilis **1** 37 **5** 329
Bacterium coli **1** 37

Bark:
mineral composition **3** 217, 226
nitrogen content **3** 215
thickness **4** 285, 297, 308; **5** 337

Bark juice:
cyclitol content:
L-inositol **3** 205, 218, 226
quebrachitol **3** 205, 218, 226
ketose content **3** 205, 219 – 220

β-hydroxy-ethyl hydrazine *see* Yield stimulants
Biogenetic isoprene rule **1** 68
Biosynthesis of rubber **1** 68
'Bottom fraction' of latex **1** 1, 68
Breeding investigations **5** 365 – 380
Bromocresol purple **1** 32
Brown bast
interrelationship with tapping intensity and latex vessel permeability **3** 208, 223, 227
irreversible character of **3** 228
relationship with tapping intensity **3** 223
symptoms of **3** 229
B-serum **1** 1 – 9, 15; **4** 317; **5** 324
Bulk viscosity **1** 76, 82

Cacodylic acid **3** 249 – 251
application of **3** 251
effect of **3** 252
Calcium carbide **2** 91
Calcium chloride **2** 138, 147, 152, 155; **4** 258 – 259
Carbide-in-applicator **2** 117
Carboxymethyl cellulose *see* Substrates for enzyme location
Catalase *see* Latex enzymes
Catechol *see* Substrates for enzyme location
Cell differentiation:
effect of cellulase in latex on **1** 74
Cellulase activity **1** 74
Cellulase in Latex and its Possible Significance in Cell Differentiation **1** 74
Centrosema pubescens **1** 62
Changes in Bacteria-free Filtrate of Hevea *Latex C-serum from Dry Trees* **5** 351
Changes in the Bottom Fraction Contents of Latex during Flow in Hevea brasiliensis **5** 391
Chemical Defoliation of Hevea brasiliensis *for Avoiding Secondary Leaf Fall* **3** 248
Choline **5** 325
Chromobacterium sp **1** 33, 35
Clonal Nursery Studies in Hevea *I. Nursery Yields and Associated Structural Characteristics and their Variations* **4** 305
Clonal Nursery Studies in Hevea *II. Relationship between Yield and Girth* **5** 332
Clones:
AVROS 33 **5** 379
AVROS 157 **3** 251; **5** 379
AVROS 427 **5** 342
AVROS 1502 **5** 332
BD 5 **5** 379

RRIM 729 **5** 342
RRIM 731 **5** 342
Tjir 1 **1** 16, 40; **2** 85, 115, 131, 59; **3** 238, 251; **5** 357, 376, 91.
Coagulants **4** 264, 272
Coagulase:
assay with commercial enzyme **5** 328
effect of calcium ions **5** 327
nature of **5** 328
Coagulation of Hevea *Latex with Surfactant and Salt: I. Development of the Process and its Effect on Raw Rubber Properties* **2** 147
Coagulum:
processing of **4** 258
large-scale poduction of **4** 259
Colletotrichum gloeosporioides Penz. **3** 232, 240 – 242, 248; **5** 339
Conversion to rubber of
^{14}C-mevalonate **3** 222
sodium acetate-2-C^{14} **3** 222 – 223
Copper sulphate *see* Yield stimulants
Corticium salmonicolour **1** 58
Corynebacterium **1** 33, 34, 35

C-serum:
effect of chemicals **5** 352
effect of heat **5** 352
effect of storage **5** 351
electron microscopy of **5** 354
enzymes **1** 1 – 9
gelling properties **4** 317
isolation of micro-organisms in **5** 353
preparation of **5** 351
quantitative determination of nucleic acids and proteins in **5** 353
rubber coagulation by **5** 324, 325
ultracentrifugation of **5** 352
Curvilinear regression **5** 335
CV rubbers **1** 76

Daldinia **2** 158
Defoliants:
choice of **3** 249
Ethrel **3** 249
monosodium acid methanearsonate (MSMA) **3** 249 – 251
paraquat **3** 249
sodium chlorate **3** 249
2, 4, 5-T **3** 249
Defoliation **3** 232, 248, 249, 250
Density trials:
commercial aspects of **1** 62
results of **1** 56
Dependence of Bulk Viscosities (Mooney and Wallace) on Molecular Parameters of Natural Rubber **1** 76
Diallel **5** 366
Dieback **3** 249
Dihydrostreptomycin sulphate **1** 32
Dothidella see Microcyclus ulei
Double covariance analysis:
steps involved **1** 54
Double Covariance Analysis in Manurial Experiments on Hevea **1** 47
Dryness:
incidence of **2** 110; **3** 207 – 208
Dry rubber content **3** 209

Effect of Hydroxylamine Hydrochloride on Micro-organisms in Hevea *Latex* **1** 32
Effects of Nitrogenous Fertilisers on Growth of Rubber Seedlings and Leaching Losses of Nutrients **5** 356
Enzyme assays
acid phosphatase **3** 206, 220
alcohol dehydrogenase **3** 206, 220
coagulase **5** 324
fructokinase **3** 206, 220
glyceraldehyde phosphate dehydrogenase **3** 206, 220
lactic dehydrogenase – carboxylase **3** 206, 220
phospholipase-D **5** 324, 325

Escherichia coli **1** 37
Esterase *see* Latex enzymes
Ethephon *see* Ethrel
Ethrel see also Yield stimulants
Amchem 68 – 64 **2** 115
Amchem 68 – 250 **2** 115
Ethephone **2** 87, 88, 90, 91, 114
(2-chloroethyl)-phosphonic acid **2** 87, 90, 91, 114
Ethrel-in-palm oil **2** 91, 116, 126, 136
Ethylene *see also* Yield stimulants
role in yield stimulation **2** 87

Factors Affecting Secondary Leaf Fall of Hevea *in Malaysia* **3** 232
Fast Blue Salt RR *see* Substrates for enzyme location
Fertilisers *see* Nitrogenous fertilisers
Foam rubber
batch process **3** 167
formulation **3** 167
properties **3** 174
Fomes lignosus **1** 58
Formic acid **1** 32; **2** 91
Fructose metabolism **3** 221
Full sib **5** 372
4-amino-3, 5, 6-trichloropicolinic acid *see* Yield stimulants

Girth:
differences in **4** 308
effect on yield **4** 285, 297
increment **3** 208
Gloeósporium alborubrum see Colletotrichum gloeosporioides
Gloeosporium leaf disease assessment **5** 340
Gloeosporium SLF **3** 245 – 246
Ground covers:
Centrosema pubescens **1** 62
influence of **1** 61
Mikania cordata **1** 62
Ottochloa nodosa **1** 63
Paspalum conjugatum **1** 63
Passiflora foetida **1** 63
Phaseolus calcaratus **1** 62
Pueraria phaseoloides **1** 62
succession patterns **1** 62
suppression of **1** 62
Growth pattern of *Hevea brasiliensis:*
measurements for assessing:
crown development **1** 60
girth increments **1** 59
relative growth rate **1** 59
tree height **1** 60
trunk growth and shoot development **1** 58
Phase I **1** 66
Phase II **1** 66

Phase III **1** 66
Phase IV **1** 66

Haemaker-Morris-Mann technique *see* Yield determination
Haga altimeter **1** 58
Half sib **5** 372
Halogenoparaffins *see* Yield stimulants
Hemitarsonemus latus Banks **3** 232, 248
Hevea benthamiana **1** 39
Hevea guianensis **1** 39
Hevea *Latex Enzymes Detected by Zymogram Technique After Starch Gel Electrophoresis* **1** 1
Hevea spruceana **1** 39
Hoagland's solution **2** 159
Hydroxylamine hydrochloride:
effect of latex serum on resistance of **1** 36
effect on bacteria and yeasts **1** 33 – 34
effect on coagulation **1** 33; **2** 138, 147, 152
interference of, in metabolic activity **1** 34

Improvements to Assisted Biological Coagulation of Hevea *Latex* **2** 138
Inbreeding depression **5** 376
Incidence of dryness **3** 207, 208
Incorporation of radioactive precursors into rubber:
acetate **1** 71
mevalonate **1** 70
Infection of Hevea brasiliensis *by* Ustulina zonata *(Lev.) Saac.* **2** 157
Influence of Weather on the Incidence of Phytophthora Leaf Fall of Hevea brasiliensis *in Malaysia* **5** 381

Kieserite **5** 357

Latex:
assessment of enzymic activity of **1** 1
bottom fraction:
particles **4** 252
staining of **5** 392
coagulation:
effect of calcium chloride **2** 138
effect of surfactants and salts **2** 138, 140, 147
optimum conditions for **2** 142
technological characteristics of resulting rubber **2** 143, 147
collection and ultra-centrifugation of **1** 1, **5** 324
composition of **1** 2; **3** 217, 226
concentration methods:
centrifugation **3** 165 – 168
creaming **3** 165
evaporation **3** 165
dipping:
coagulant dipping **4** 263
effect of viscosity on **3** 174
physical process of **4** 275
straight dipping **4** 263, 266, 275

enzymes:
acid phosphatase **1** 3, 4, 6
aldolase **1** 3, 4, 6
catalase **1** 3, 4, 6
coagulase **5** 323
esterase **1** 3, 4
hydrolases **5** 323
peroxidase **1** 3, 4, 6
phospholipase-D **5** 323
polyphenoloxidase **1** 2, 3
flow:
changes during **5** 394
effect of repeated tapping 5 397
effect of yield stimulation **5** 397
fractions **4** 280
pattern **1** 15, 16
gelling time:
effect of cations **4** 318
effect of microbial population **4** 318
effect of proteinaceous materials **4** 318
high d.r.c.:
advantages of **3** 177
disadvantages of **3** 177
economics of preparation **3** 176
procedure for production **3** 169
properties of **3** 169 – 171
nitrogen content **3** 215
output **3** 208
serum:
cyclitol content **3** 205, 217, 226, 227
deproteinisation of **4** 318
enzymic activity **3** 220
ketose content **3** 205, 218 – 219
solid content **3** 210
Latex Dipping II. Development of the Theory of Deposition of Rubber and the Influence of Coagulant **4** 263
Latex Flow Studies VII. Influence of Length of Tapping Cut on Latex Flow Pattern 1 15
Latex Flow Studies VIII. Rheology of Latex from Hevea *Collected over Successive Intervals from Tapping* **4** 277
Latex vessel:
density of **3** 198; **4** 310
diameter of **3** 198; **4** 308
permeability **3** 227
plugging:
effect of length of tapping cut **1** 15
effect of turgor pressure changes **1** 16, 20
effect of yield stimulation **1** 21
index **1** 15
intensity **1** 15 – 17

quantitative indication **1** 15
significance **2** 85
Latex vessel rings:
density of **3** 196
distance between **3** 196; **4** 309; **5** 337
distribution of **3** 195
effect of age **3** 196
number **3** 193 – 195; **4** 308, 285, 297; **5** 337
L-forms of bacteria **5** 351
Linear regression **5** 335
L-inositol **3** 205, 217, 226
Listeria sp. **1** 33, 35
Lutoids **1** 1, 15; **4** 277, 280, 283; **5** 324, 297
Lutoid membrane **4** 283

Magnesium:
determination:
interferences **4** 300
procedure **4** 299
reagents **4** 298 – 399
sample preparation **4** 299
recovery **4** 302
Megatron photo-electric cell **1** 64
Microcyclus ulei P. Henn. **1** 39; **3** 249
Microflora of *Hevea* latex *see also* under specific names:
Aerobacter sp. **1** 33, 35
Chromobacterium **1** 33, 35,
Corynebacterium **1** 33, 34, 35
Mikania cordata **1** 62
Molasses:
effect on coagulation **4** 258
Molecular parameters of natural rubber
intrinsic viscosity **1** 77, 82
mean square distance between chain ends of the molecule **1** 77, 82
number average molecular weight **1** 77, 82
radius of gyration **1** 77, 82
weight average molecular **1** 77, 82
Mooney viscosity **1** 76, 82
MSMA *see under* Defoliants
Mycoplasma **5** 351

Naphthalene Black 10B **1** 2
Nephelometer **1** 32, 34
Nitrogenous fertilisers
ammonium nitrate **5** 356
ammonium sulphate **5** 356
effect on growth **5** 358
effect on pH of soil **5** 361
effect on root production **5** 362
urea **5** 362

Skim latex:
additives **4** 257
deammoniation of **4** 258
Sodium chloride **1** 32
Some Structural Factors Affecting the Productivity of Hevea brasiliensis *I. Quantitative Determination of the Laticiferous Tissue* **3** 193
Some Structural Factors Affecting the Productivity of Hevea brasiliensis *II. Correlation Studies between Structural Factors and Yield* **4** 285

South American Leaf Blight **1** 39
Staphylococcus aureus **1** 37
Starch gel electrophoresis
apparatus for **1** 2, 3
power stabiliser **1** 2, 10
preparation of sera samples for **1** 3
Stoke's Law **3** 166
Stone cells **3** 193
Streptococcus **1** 37
Studies on Some Gelling Properties of Hevea *Latex Serum* **4** 317
Substrates for enzyme location
α-naphthyl acetate **1** 3
carboxymethyl cellulose **1** 74
catechol **1** 2
Fast Blue Salt RR **1** 3
p-cresol **1** 22
phenolphthalein diphosphate **1** 3
potassium iodide **1** 33
Surfactant
di-octyl sodium sulphosuccinate **2** 138, 145, 147
effect on coagulation **4** 258
Surfactant/calcium chloride rubber:
technological properties of **4** 260

Tapping:
effect on brown bast **3** 223
effect on carbohydrate content of bark and latex **3** 225
effect on mineral and cyclitol content of bark and latex **3** 226
effect on rubber content of latex **3** 227
efficiency of **3** 198 – 202
systems:
5mm. d/2 **2** 93
5mm. d/4 **2** 93
4 x 5mm d/2 (S x 2d/4) **2** 93
S/1. d/1 400%
S/1. d/3 133%
S/2. d/1 200%
S/2. d/2 100%
S/2. d/3 67%
S/2. d/2 (2 x 2d/4) **2** 93
S/4. d/2 (2 x 2d/4) **2** 93
S/8. d/2 **2** 93
S/8. d/4 **2** 93
Tetrahydrofuran **1** 78
Thixotropy **4** 277
Toluidine blue **5** 393
Turgor pressure *see also* Latex vessel plugging **1** 15, 16, 20, 21
(2-chloroethyl)-phosphonic acid *see* Ethephon
2, 4-dichloro-5-fluoro-phenoxyacetic acid *see* Yield stimulants
2, 4, 5-T *see* Yield stimulants

Ustulina zonata (Lev.) Sacc. **2** 157 –167

Virgin bark structure **3** 193

Wallace plasticity **1** 76, 82
Wintering **2** 233, 234, 235, 238

Xylaria **2** 158

Yield determination
Haemaker-Morris-Mann technique **4** 305
Yield-Girth Relationship Studies on Hevea **1** 23
Yield stimulants *see also* under specific names
acetylene **2** 86
applicators **2** 92, 108
β-hydroxy-ethyl hydrazine **2** 87
bromoethane **2** 92
carbide **2** 92, 114
copper sulphate **2** 86
dibutyl phthalate **2** 115, 126
EDBROZA **5** 392
effect on bark damage **2** 110
effect on dry rubber content **2** 109
effect on incidence of dryness **2** 110
effect on trees **2** 108
Ethrel **2** 91; **5** 392
ethylene **2** 86
ethylene oxide **2** 92
halogenoparaffins **2** 86
indole acetic acid analogues:
2, 4-D **2** 86
2, 4, 5-T **2** 86, 91, 114, 126; **5** 392
initial application of **2** 94 – 100, 115, 126, 131
picloram **2** 86, 116
reapplication of **2** 100, 116, 126, 131
2, 4-dichloro-5-fluoro-phenoxyacetic acid **2** 86
4-amino-3, 5, 6-trichloropicolinic acid **2** 114

Zimm plot **1** 78
Zymogram technique **1** 1, 2

Printed by Rajiv Printers, 73 Jalan Ampang, Kuala Lumpur.
